Invite your peers to join . . .

World-class research in technology development and sustainability assessment, for strategic sustainability transition.

About The Centre

DTU CENTRE FOR ABSOLUTE SUSTAINABILITY

Our research within the Centre for Absolute Sustainability is organised according to three pillars, each with contributions to our goal of enabling cross- & interdisciplinary research to guide society in the transition towards absolute sustainability. This transition involves defining safe and sustainable operating spaces for society and activities, developing sustainable technologies and identifying the pathways required for implementation of new solutions. The three research pillars of the Centre are:

- **SYSTEMIC MODELLING:**
"Where should we go?"
- **SYSTEMATIC ENGINEERING:**
"How Should we get there"
- **STRATEGIC IMPLEMENTATION:**
"What should we do to get there?"

See you soon

DTU CENTRE FOR ABSOLUTE SUSTAINABILITY

We look forward to seeing you

Kind regards,

Michael Z. Hauschild &
Tim C. McAlóone
